  - Self-Retracting Devices

## Fall Arrest Equipment - Service & Repair

### Did you know?

- Harnesses, lanyards and anchor points require an annual inspection
- CSA Z259.2.2-17 standard on Self-Retracting Devices manufactured after August 1, 2019 requires devices to be classified into 1 of 4 classes. This classification will determine the revalidation frequency
- Self-retracting lifelines manufactured under any previous CSA standard do not require the updated inspection criteria for revalidation. These devices should be evaluated under the relevant standard requirements that were in place during their period of manufacture
- All units must be recertified or revalidated if they have been subjected to a fall or impact

### Is downtime a concern?

We also provide rental options to cover your short- or long-term needs.
